

MODERN BUILDING SYSTEMS, INC.
"The Smart Choice..."

Project Summary

Beaverton School District Administrative Office

www.mbs-modular.com

The Beaverton School District in Beaverton, Oregon came to **Modern Building Systems** seeking a green solution to their growing need for administrative space. This 2,688 square foot building is made up of 3 modules and contains office space, a records room, and a conference room.

This building's most striking exterior feature is its clerestory roof, which provides architectural interest from the curb and natural light for the open workspace inside. The height and angle of the roofline also facilitates a spacious, open feeling of high ceilings throughout the interior. The panel for the roof was built in Modern's plant and crane-lifted onto the building once it was delivered to the site.

Another unique feature of this building is the HVAC system, which allows each room's environment to be controlled individually. The system used here is a high-efficiency design that contributes to the client's desire for a green structure.

The Beaverton School District chose to work with **Modern Building Systems** on this project primarily due to the fact that modular building facilitates time-frame requirements. The convenience of being able to use a pre-existing intergovernmental agreement allowed them to bypass the time-consuming and work-intensive bidding process. They were also seeking a solution that would allow for minimal disruption to the operation of their administrative offices.

For the Beaverton School District, as well as any other environmentally-, time- and budget- conscious organization, the ease and affordability of building modular with **Modern Building Systems** is "The Smart Choice..."

Features:

- Aesthetically pleasing exterior, with clearstory roof
- Green building, constructed to be environmentally friendly
- Individually controlled HVAC system
- Equipped with fire alarm system
- Tight timelines for completion
